

Enviro™ Cover System is an economical, non-removable, geosynthetic Alternative Daily Cover (ADC) for municipal solid waste landfills. The Enviro™ Cover System consists of:

Enviro™ Cover - classified as a nonreusable geosynthetic Alternative Daily Cover in ASTM D 6523-00 (2009), complying with ASTM standards. Daily, Extended and Intermediate Enviro™ Cover films are designed with varying grades, providing landfill operators with options of flexible cover duration periods.

Enviro™ Cover Deployer - Enviro™ Cover films are easily applied with EPI's, patented and patent pending Deployers. These Deployers are either self propelled or attached quickly and easily to a range of Prime Movers commonly used in landfills.

The Method of Application - Enviro™ Cover is unrolled from the Deployer while ballast material is simultaneously discharged at controlled rates to securely anchor the Enviro™ Cover onto the working face. On successive adjacent panel runs, an overlap is formed and with the weight of the ballast, a compression type seal is created. This procedure is followed until the working face is completely covered.

The Enviro™ Cover System is a globally recognized and accepted solution to maximizing cover efficiency and performance, utilizing a proven and reliable technology with the utmost economical, environmental and operational benefits.
